

AIRCELLI STRETCH

Seating satisfaction from a **mesh back** masterpiece.

AIRCELLI STRETCH

Aesthetic aims meet ergonomic excellence in the meticulously-designed Aircelli, now with a seat for taller sitters.

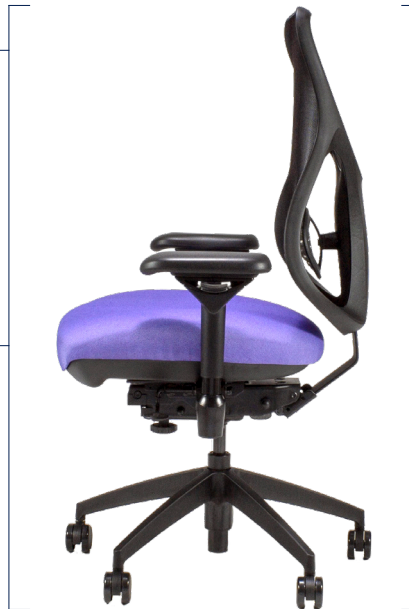

A cloud of corporate comfort, the Aircelli is the ultimate evidence that style and seating satisfaction can blend seamlessly. Form and function flow through its striking semblance. Combined with BodyBilt's ergonomic, longer seat, it creates an unequalled experience.

THE SMART FRAME YOU NEVER TOUCH

Unique design and dynamic tension of the mesh into the frame creates a disappearing edge. The shoulders and upper back don't touch the frame, providing enhanced comfort and superior ergonomics.

SEATING SATISFACTION

The #9 seat is 4" deeper and 2" wider than the standard BodyBilt seat, providing the extra room and support needed for taller sitters.

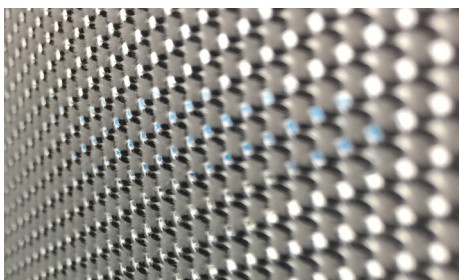

UNIQUE LUMBAR SOLUTION

The lumbar features air cell technology, never before used in a chair. It allows for compression and support, greater airflow, and a glove-like fit against your back.

UNIMAGINABLE ARM ADJUSTABILITY

Side-to-side mobility, rotation of the arm pad, and extreme vertical range of motion are engineered to follow your natural arm motion. Super soft pads with elegant waterfall front edge provide superb comfort.

MESH THAT HAS NO MATCH

The elastomeric mesh offers greater support via a tighter suspension in the lower back, while relaxing tension in the upper back area to accommodate the shoulders.

BRILLIANT ADJUSTMENT MECHANISM

The center-tilt J-Mechanism features four adjustments that let you perfectly position your chair: seat angle, seat height, backrest angle, and seat depth.

AHEAD OF THE CURVE

The optional Aircelli headrest molds perfectly to the chair with an interlocking design to hold it in place. Two layers of foam provide a comfortable support for your head.
