

The R-mechanisms provides an easy and versatile alternative in seating comfort. The Synchro-tilt mechanism allows for a free rocking mode or the seat/back angle may be locked into a number of incremental positions. The R2408 allows users to control their own ergonomic level of comfort. The #8 seat pan is BodyBilt's minimally contoured seat design for moderate sized workers. The R-style mechanism features easily accessible controls with anti-kickback lockout.
