AIRCELLI WITH CUPRON® COPPER-INFUSED TECHNOLOGY

A cloud of corporate comfort made for seating satisfaction - now with protection that goes beyond perfect posture.

The Aircelli combines super-soft mesh and cutting-edge air cell lumbar with BodyBilt's ergonomically-contoured seat for an unequalled experience. Now offered with new Cupron® copper-infused, EPA-registered technology in the seat and mesh back, this innovative chair provides both comfort and anti-viral properties for an additional layer of protection.

COPPER-INFUSED CONSTRUCTION

The Cupron® mesh back option adds further health properties to the Aircelli's ergonomic design. This mesh has biocidal, antifungal, and antiviral properties to better promote health in the workplace.

PROTECTION WITH STAYING POWER

The Cupron® patented technology embeds copper into the fibers of the seat fabric and the mesh back that helps protect the user from a range of bacteria and fungi that can cause odors and deterioration over time.

UNIQUE LUMBAR SOLUTION

The lumbar features air cell technology, never before used in a chair. It allows for compression and support, greater airflow and a glove-like fit against your back.

SEATING SATISFACTION

Cupron® copper-infused technology in the seat fabric adds further antimicrobial protection, building on the comfort of BodyBilt's multiple seat contouring options.

MESH THAT HAS NO MATCH

The elastomeric mesh offers greater support via a tighter suspension in the lower back, while relaxing the tension in the upper back area. The Cupron® mesh option adds further health properties to the Aircelli's ergonomic design.

CLEANING CONVENIENCE

Along with being a layer of defense against viruses and fungi, the Cupron® copper infusion woven into the seat fabric has self-sanitizing properties and is easily cleanable.

COLOR COORDINATION

The Cupron® mesh back and copper-infused seat options are available in two finish colors to match your style preference: Cupron Copper or Cupron Graphite.
