## MIDCELLI WITH CUPRON® COPPER-INFUSED TECHNOLOGY

The ergonomic support you need, designed for your comfort and protection with new copper-infused seat and back options.

The Midcelli is the mesh mid-back chair you've been waiting for, ideal for home and office environments. Now offered with new Cupron® copper-infused, EPA-registered technology in the seat and mesh back, this innovative chair provides both comfort and anti-viral properties for an additional layer of protection.

### COPPER-INFUSED CONSTRUCTION

The Cupron® mesh back option adds further health properties to the Midcelli's ergonomic design. This mesh has biocidal, antifungal, and antiviral properties to better promote health in your workplace.

### PROTECTION WITH STAYING POWER

The Cupron® patented technology embeds copper into the fibers of the seat fabric and the mesh back that helps protect the user from a range of bacteria and fungi that can cause odors and deterioration over time.

### EXCEPTIONAL ERGONOMICS

From the new mesh mid-back design to the air cell technology of the lumbar, the Midcelli is designed for the perfect ergonomic fit. It allows for compression and support, greater airflow and a glove-like fit against your back.

### SEATING SATISFACTION

Cupron® copper-infused technology in the seat fabric adds further antimicrobial protection, building on the comfort of BodyBilt's multiple seat contouring options.

### MESH THAT HAS NO MATCH

The elastomeric mesh offers greater support via a tighter suspension in the lower back, while relaxing the tension in the upper back area. The Cupron® mesh option adds further health properties to the Midcelli's ergonomic design.

### CLEANING CONVENIENCE

Along with added defense against bacteria and viruses, the Cupron® copper infusion woven into the seat fabric has self-sanitizing properties and is easily cleanable.

### COLOR COORDINANCE

The Cupron® mesh back and copper-infused seat options are available in two finish colors to match your style preference: Cupron Copper or Cupron Graphite.
